As **OMSA METAL**, our environmental policy is as follows within the scope of our business activities including the design, production and sales of temporary edge protection safety barriers, metal telecommunication connection boxes and grease pump components:

- To minimize any negative effects on the environment resulting from our services by prioritizing the needs and expectations of related parties (internal/external) and customer satisfaction,
- To comply with national and international standards and legal requirements in our activities with respect to the environment,
- To make use of recyclable wastes in all our activities, minimize the use of limited natural resources, prevent pollution which might occur due to harmful wastes for the environment, protect natural assets, take and have others taken the required measures in order not to affect the lively life negatively, n pollute the environment and to improve it positively,
- To develop and continuously improve the efforts made for environmental management and minimization of environmental impacts in all processes,
- To ensure the minimization of wastes at source, recover and recycle of the same, if possible, and disposal of wastes which cannot be recovered through suitable methods,
- To provide regular trainings and raise the awareness of employees for continuous improvement of the environmental performance and active engagement of the employees in environmental protection efforts,
- To contribute to continuous improvement by establishing environmental objectives and targets.

In this sense, we, as OMSA METAL, hereby guarantee to set our environmental objectives all the time, review all our objectives on a constant basis and generalize this policy of us among all our employees.

SUSTAINABILITY APPROACH

OMSA METAL carries out its activities to develop, produce and offer excellent products and services based on sustainability relations. We are trying to prevent emissions and minimizing the use of resources. We pay attention to the sustainability of our products along the whole supply chain to ensure this.

Our sustainable environmental objectives include turning environmental awareness into a life philosophy by providing trainings to all employees from top management to the lowest level about environment, regarding environmental aspects in all investments and supply decisions, launching new projects in consideration of the scope of sustainable environment, contributing to recycling for the purpose of minimizing wastes at source and disposing of the same without harming the environment, searching for alternative means of transportation that would harm the environment at the least and leaving a liveable world to next generations based on a sustainable development approach.

PRINCIPLES OF SUSTAINABILITY

- To carry out the activities in our factory in compliance with the applicable laws, regulations and standards,
- To minimize exposure of our employees and suppliers to environmental, health and occupational safety risks,
- To enhance the use of alternative raw materials and fuels in order to minimize the use of non-renewable natural resources,
- To monitor the use of chemical materials and minimize the use thereof,
- To prevent any increase in the quantity of hazardous wastes by way of tracking and ensure the disposal of these wastes by licenced firms,

- To monitor the risk analysis concerning the environment on a regular basis,
- To store our non-hazardous wastes in proper waste storage boxes within the scope of zero waste objective and ensure the disposal of the same by licenced firms,
- To perform an environmental impact assessment prior to the implementation of large scale investment projects and launch the projects in compliance with the applicable laws, standards and regulations,
- To raise our suppliers' awareness of our environmental values and compliance with our environmental policies and rules during their visits to our factory,
- To adhere to the sustainable development approach in product development, production, distribution and implementation phases in order to minimize the impacts on human health and environment and restrict any probable waste quantity,
- To minimize the use of energies (electricity, water, natural gas, fuel etc.) leading to carbon emission,
- To inform the stakeholders regularly about the potential environmental impacts of our activities and products, assess their requests and stay in touch with them.
